Sugarcane and carbon emissions – Brazil

The Executive Director would like to draw your attention to the article below.

This information is very useful to discuss the contribution of sugar to a cleaner world and please disseminate as widely as possible.

Sugarcane contributed to removing carbon from the atmosphere in the last 20 years in Brazil

IEA Bioenergy
Technology Collaboration Programme

International Energy Agency outlines how sugarcane contributed to removing carbon from the atmosphere in the last 20 years in Brazil.

This innovative study showcases an example where energy production and land management net removals can be complementary, at scale when applied properly. Please click on the link below for the full report and the peer review.
